WHO WE ARE

Who we are

Welcome to Glass Hub, a premier metal and glass fabrication company based in Um Al Quwain, UAE. We specialize in delivering high-quality, innovative solutions for a diverse range of industries, including construction, architecture, and interior design.

Our team is comprised of skilled artisans and engineers who are passionate about transforming raw materials into stunning, functional designs. With state-of-the-art technology and a commitment to excellence, we ensure that every project meets the highest standards of quality and craftsmanship.

At Glass Hub, we pride ourselves on our customer-centric approach. We collaborate closely with our clients to understand their unique needs and provide tailored solutions that elevate their projects. Whether it's custom metalwork, elegant glass installations, or comprehensive fabrication services, we are dedicated to bringing your vision to life.

Located in the heart of Um Al Quwain, we are strategically positioned to serve clients across the UAE and beyond. Our commitment to sustainability and innovation drives us to continuously improve our processes and products, ensuring we remain at the forefront of the industry.

Join us on this exciting journey as we shape the future of metal and glass design. Together, we can create spaces that inspire and endure

Our Process & Services

Through early collaboration, we support the interdisciplinary construction teams to achieve their creative vision and improve the constructability of it.

We are specialists in building iconic landmarks through our state-of-the-art technology, research and development, value engineering, premium craftsmanship, and ability to understand and appreciate design complexity.

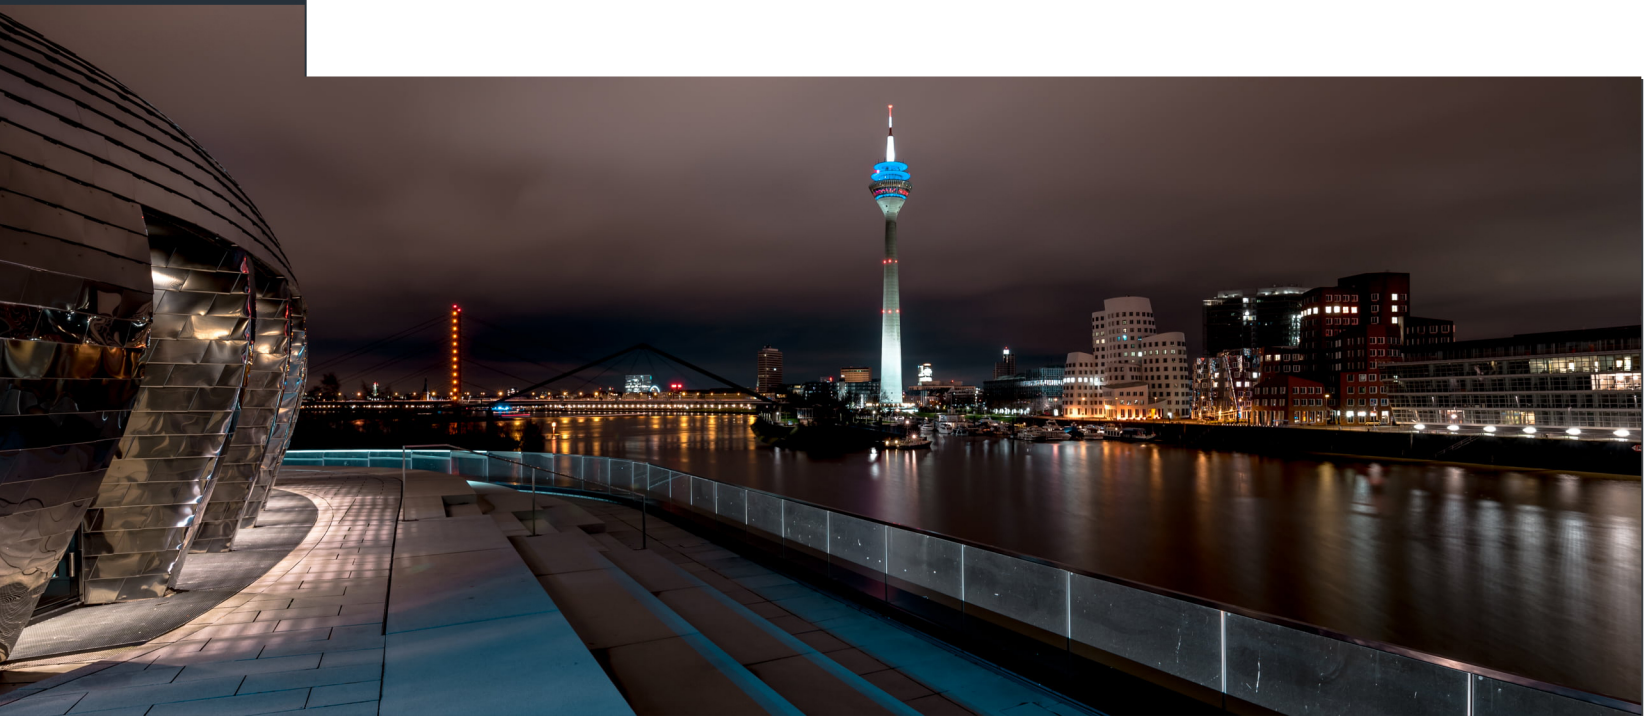

WHO WE ARE..

VISION

Vision

Our vision is to improve on what we are already doing but to try and do it better. Our focus is on client service through ongoing development of our staff and operatives. We believe in developing from within and testament to this is that most of our Project Managers, Site Managers and Foremen have developed from within our own ranks. We believe this enables us to provide continuity with regards quality of work and general operating standards. In conjunction with our in house development strategies we continue to invest in factories and facilities which underpins our ability to provide quality service and fit out to the market. All of this gives us a unique position in the market and enables us to continue to participate in iconic projects in the region, many of which are signature projects.

MISSION

Mission

Our mission is simple. We focus on quality rather than quantity. Our aim is to achieve sustainable growth over the long term through, new and repeat business, and ongoing investment in plant, equipment and skills

Our Journey

Glass Hub was established as an engineering, manufacturing and installation company specialising in the creation of bespoke structures, architectural glass, and metal works. We specialize in Architectural steel, weathered steel, stainless steel, aluminium, glass, special alloys and brass, bronze and copper, expanding our portfolio of Fit-Out works to bespoke fixtures, furniture and equipment (FF&E).

Our extensive list of repeat clients attests to our unwavering dedication to achieving the best for our partners.

Glass Hub maintains transparent relationships with its stakeholders, allowing everyone to have full visibility on the requirements of each project from design to execution, building long term trustworthy partnerships.

Innovation, commitment to excellence, trust, collaboration and sustainability form our philosophy, we abide by, as we continue our journey worldwide, crafting grandeur and transforming architectural visions into breath-taking reality.

Consultancy, Design & Engineering

Through early collaboration, we support the interdisciplinary construction teams to achieve their creative vision and improve the constructability of it.

Manufacturing & Installation

specializes in high-quality metal and glass manufacturing and installation, delivering innovative solutions tailored to meet diverse industry needs. Our expert team ensures precision and craftsmanship in every project, transforming ideas into reality..

Metals We Work With

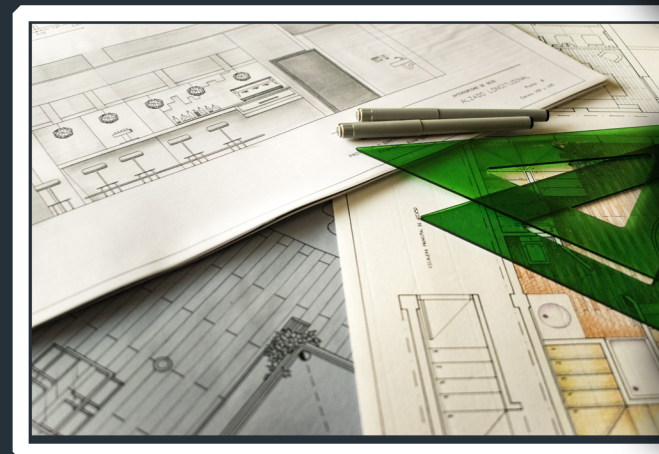

The right metal fabrication equipment and technique are as versatile as they are effective. We understand that extraordinary sheet metal fabrication depends as much on the machine used, as the talent and experience of the craftsmen, to convert the engineering design into reality.

We specialise in stainless steel, aluminium, brass/bronze, weathered steel, zinc, glass, special alloys and copper, expanding our portfolio to fixtures, furniture and equipment (FF&E).

Fit-Out & Construction

We assist design teams and engineers at the design stage and throughout construction to find the right combination of materials and systems to deliver bespoke Fit-Out, and complex construction solutions considering resources, logistics, and the people involved, to ensure the project is delivered on time and budget

SERVICES

Glass Hub provides engineering and manufacturing services focusing on the creation of bespoke structures, architectural glass, and metal works.

We are a team of engineers, architects, and craftsmen who work with dedication, curiosity, and passion for design, engineering, and fabrication.

We assist the design teams with engineering solutions and support our partners with fabrication and installation on site. Through our spectrum of services, ranging from design, manufacturing, and installation, we also offer to manage the complete production process, from concept design to fabrication and installation

We have witnessed the benefits of being involved in the early stages of a project first hand by assisting the architects and engineers with our engineering and specification expertise, material samples and mock-ups to achieve the best design, avoiding time consuming and costly changes at the later stages of a project.

We are specialists in building iconic landmarks through our state-of-the-art technology, research and development, value engineering, premium craftsmanship, and ability to understand and appreciate design complexity, with a full commitment to push the technical boundaries of the industry in order to improve the built environment in all aspects.

We use materials and fabrication processes in innovative ways and develop bespoke techniques to craft and to realise complex designs

Key to fulfilling and exceeding our clients' expectations is our established engineering process and quality control standards which are fully integrated with our fabrication facilities. The majority of the engineering team is located adjacent to the manufacturing facilities which allows for active communication and encourages the trial of innovative ideas to collaboratively resolve project challenges.

For a successful completion of a project, we develop project specific logistics solutions to ensure a timely delivery and efficient installation on-site, based on the confidence we have developed with our network of trusted suppliers through years of collaboration.

MANUFACTURING & INSTALLATION

Design & Fabrication

Design for fabrication serves as a single source of information for construction projects by seamlessly blending data from the design phase into construction BIM models or shop drawings. Through an industrialised construction process, design models become the basis for fabrication. This workflow can significantly reduce the rework found in the traditional design and construction process and yield big rewards for project owners and stakeholders.

Logistics

We provide building materials to building sites at short notice when the actual construction work gets underway: the materials have to arrive in good time, as construction phases require punctual deliveries. As a result, intelligent production, sales planning, flexible warehousing, and distribution are crucial for the building materials in order to guarantee availability, even at peak demand periods.

Metal Works

Our team of highly-skilled engineers and fabricators are experts in metal fabrication. Thanks to investments in industry leading technology, we also have state-of-the-art welding facilities in-house with the capability to weld parts in all. From welding to bending, folding, waterjet cutting, flame cutting, hydroforming, and CNC machining, our in-house team of experts will manufacture the pieces to put together the latest and most innovative designs, no matter form, size, or number.

Mock ups

Get in contact with us to find out more about our pre/post contract visual mock-up construction service to ensure the expectations of all project participants are aligned. There is nothing more important than a smooth workflow to achieve a successful result and we have proved over time that early mock ups are the best tool to ensure this.

Supply & Installation

Upon completion of the design and fabrication stage, our team will deliver and install the components built in our facilities up to the highest industry standards. Our in-house expertise comes from 35 years of experience on the construction industry both locally and international. Our track record of successful projects completed speaks about our ability to handle special requests which require an extra level of commitment towards our clients and towards the projects we work in.
